

Learning is easier with a little help

Summer Science Fun

Explore Oceans Under Climate Change

Dive Into Global Warming, Ocean Acidification And Coral Bleaching!

We invite middle school students to engage in immersive and collaborative science explorations with Ms. Woodley, an innovative and highly experienced science educator. Students will write, draw, chat, talk and share content through Meemli's private online learning platform. The program is fun and informative, and will build skills for science studies in school and beyond!

Together we will:

- Explore the topics of Global Warming, Ocean Acidification and Coral Reef Bleaching
- Perform experiments with common household materials to directly observe the impact ([view list](#))
- Collaborate online with peers while sharing ideas and learning together (**Meemli provides a safe, private online learning space for students where no personal information is collected or shared.*)
- Sharpen skills in research, observational exploration, communication and collaboration
- Learn about human impact on marine ecosystems and know what actions we can take!

Sign up now! Space is limited.
